in wireless communications technologies, smart phones are being developed to be capable of providing multimedia services including a wide variety of services such as video communication, photographing, capturing, video conferencing, games, audio recording, and the like. However, such a smart phone may be moved at high speed, and may be damaged or separated from the smart phone if a user holds the smart phone with one hand and uses the other hand to carry a bag, an umbrella, or the like.

Thus, it is important for the user to grip a smart phone with two hands and carry it without dropping it. Q: How to get Response.StatusCode from IHttpActionResult I want to get the HTTP Response Status Code of an HttpAction from a Controller method. I tried to call Response.StatusCode, but I am getting NullReferenceException. This is what I have: public IHttpActionResult GetServerProperties() { if (Response.StatusCode != 200) { return BadRequest(); } return Ok();

} I'm not sure how to get the response status code from the

IHttpRequestResult. A:

IHttpRequestResult provides status code as 2nd parameter of Execute

method, like public

IHttpRequestResult

GetServerProperties() { if

(Response.StatusCode != 200) {

return BadRequest(); } return Ok();

} Instead of getting StatusCode you

can get status message from Respon

se.Content.ReadAsStringAsync().R

esult From below link you can get

all HTTP status code and status

message in response. Finding a parking space in New York City is often a headache. But a New Jersey company is trying to make it a bit easier with an app called Easy Park. The app, available [2d92ce491b](#)
