Q: Dealing with the general case Suppose we have $f: [0,1] \rightarrow [0,1]$ continuous and strictly increasing. I need to construct a function $g: [0,1] \rightarrow \mathbb{R}$ which is continuous and $g(0)=0$ and strictly increasing. Moreover, $f \circ g$ is strictly increasing as well. I have tried the following: Let $x, y \in [0,1]$. Since f is continuous, there exists a $t_0 \in [0,1]$ such that $f(t_0)=x$. Since f is strictly increasing, we have $f(0) < f(t_0)$. Let $t_1 \in [0,1]$. Since f is continuous, there exists a $t_2 \in [0,1]$ such that $f(t_2)=t_1$. Since f is strictly increasing, we have $f(t_2) < t_1$. Let $g: [0,1] \rightarrow \mathbb{R}$ be defined by $g(t_0)=f(t_0)$, $g(t_1)=f(t_1)$ and $g(t_2)=f(t_2)$. It is clear that g is continuous. Now, let $t \in [0,1]$ with $t < t_0$. We have:
$$\begin{aligned} & g(t) < g(t_0) = f(t_0) = x \\ & g(t) < g(t_1) = f(t_1) = t_1 \\ & g(t) < g(t_2) = f(t_2) = t_2 \end{aligned}$$
