Magics is software from Materialise, an all-round industrial solutions company that designs, engineers, and manufactures the world's best products. Apple is asking customers to return old iPhones for new ones. The company is recalling 10 million older iPhones sold since the end of September as a result of an undisclosed problem that was recently discovered with the device's battery. Apple's advisory, posted on its website on Tuesday, said that "battery replacement" is the only repair option. The company also confirmed that Apple Stores in the United States and Canada will offer to replace defective batteries. Batteries are the most common point of failure for mobile devices, as they can often fail within the first year after purchase. Apple launched a program called Battery Replacement in 2016 that offered iPhone owners a free battery if their device was experiencing problems. But Apple only allowed users to submit photos of their broken devices. It was only until this year that the company introduced new troubleshooting tools, including an iOS update that asked users to check that their phones were plugged into a power source and that the device was turned on. In a statement, Apple said that the recall involves iPhone 6, iPhone 6 Plus, iPhone 6S, iPhone SE, iPhone 7, iPhone 7 Plus, and iPhone 8 devices sold between September 2016 and October 2017. It did not provide information about the potential defect in the devices or how the company became aware of it. 2d92ce491b
