. Contains the following:Table of contents.. 7.2.1 Reasons for Voluntary Turnover. The same types of documents are used, and CPA firms may maintain a similar set of statements and books. The individual return line has a Name, a 645 Transaction Code, and a Section (and/or File) Code. A parallel line for the partner is added and also has a Name, Section Code, and File Code. Alternatively, the information may be kept in a system-wide book, to be kept separate from the general ledger. In this case, there are no parallel lines but the general ledger does contain the individual Return information. Tally is a Tally ERP 9 -20000, released in early 2009 (more than 7 years after ERP 6.0). It is built on top of the Embarcadero Delphi framework. Its graphical user interface was the first of the current ERP releases to be based on C++Builder. The team used Delphi and C++Builder for the first time in the Tally development. Tally is designed for the general ledger (GL) and accounts receivable (AR) data. The back-end of the software houses an infrastructure that consists of the databases, web servers, and network management. The software was originally developed by Tally Solutions Ltd. in 1992 as their Tally-GL/Tally-AR, and sold to Helios Solutions from 1998 to 2003. This was then called Helios Tally. It was acquired by IFS Software (now also called Helios Solutions) in 2003. The first version of the software was released in January 1992. It was available for the MS-DOS platform, with Windows and Macintosh versions being released in 1994 and 1999 respectively. The software features have changed little since then. The ERP product suite is currently developed and sold by Helios Solutions, formerly known as IFS Software.
