Delta Plc Password Tool 1.0 17 Delta Plc Password Tool 1.0 171 What do you think?Threshing machine The threshing machine was an item of grain production technology developed in the late 17th and early 18th centuries in Western Europe, primarily in the Low Countries (in modern-day the Netherlands and Belgium). The threshing machines (Dutch: vriezer, French: vélisseur, German: Wiesenzücher) were fully automatic, in contrast to the labour- and power-intensive on-farm threshing mechanisms of earlier times. The threshing machine became a major achievement in technological innovation of the industrial revolution. History The threshing machine reached its heyday in the late 18th century. The machine was invented and perfected by the German inventor Johann Andreas and the Dutch inventor Johannes Baisemans in the 1770s; Baisemans established his factory in Breda. Its use spread rapidly in the Low Countries during the late 18th and early 19th centuries, and spread to England and the United States. By the 1840s, the threshing machine had brought Western European agriculture to the edge of a major transition into mechanized harvesting. The threshing machine changed the nature of farming. It allowed whole agricultural populations to live in the countryside or move to the countryside; before the machine, a family had to live on a farm that could be worked by the family or hired farm help, if it was to be able to support itself and its members. By the start of the 19th century, the threshing machine was in widespread use throughout much of Europe and North America. A growing market for its components – the threshing machine, its gear, bearings, etc. – also contributed to the spread of its technology. The wheat threshing machine could be found in almost every household by the 1860s in Europe; in 1880, 1.5 million wheat threshing machines were in use in Britain alone. By the end of the nineteenth century, fully automatic threshers were in use throughout much of Europe and North America. The first steam-powered threshing machines came on the market in the 1840s, but their use was limited by lack of coal 82138339de
